## The Company

We are oldest switch-makers of India since 1935. An era where producing a high grade electrical switch was inconceivable, our founder Late Shri Shanti Swarup Khosla manufactured the superlative tumbler switches and electrical accessories , with the vision to bring light to the homes of India. The vision was further enhanced by his son, Late Shri Krishan Swarup Khosla who brought a major turnaround in the company with his creativity and exceptional organisation skills, he originated high tech modular and luxury switches and myriad of electrical commodities. This legacy of excellence and expansion is further carried forward by our Managing Director Shri Nitin Khosla who emphasises on maintaining a long lasting relationship with the clients through quality perfection. SSK has revolutionised the electrical engineering industry with its unwavering quest for bringing state of the art products and technology to the nation.

## EXTRA ADVANTAGES OFFERED IN SIGNATURE MODULAR SWITCHES AS COMPARED TO THE ORDINARY MODULAR SWITCHES

<p><b>ORDINARY MODULAR SWITCHES</b> with plastic clips, mounted on plastic Plates</p>	<p><b>SSK MODULAR SWITCHES</b> fastened with screws on Steel Plate</p>
<p><b>Bulging</b> Bulging is inevitable due to pressure of cables on the plastic plate &amp; the modules, leaving a gap for insects and also spoiling the look of the interiors including unnecessary pressure on the clips.</p>	<p><b>No Bulging</b> Bulging has been eradicated by using steel plates which seat themselves firmly with the box &amp; are dust and vermin-proof. There is no cable pressure on the modules as they are fastened to the steel plate.</p>
<p><b>Low Fire Protection</b> Plastic plate which becomes a single plastic unit after clipping the modules becomes highly susceptible in case of fire hazards and can't give any added protection.</p>	<p><b>High Fire Protection</b> Steel plate provides extra protection in case of fire due to short circuits. It acts as firm barriers and contains the fire within the junction box.</p>
<p><b>Modules with plastic clips</b> Switches are provided with moulded clips used for fixing modules on the mounting plates. These clips have a tendency to break under pull and push stresses more over the clips loose their resilience due to aging.</p>	<p><b>Modules with screws</b> Switches are mounted on steel plates with screws therefore they are held firmly and can withstand any stress of pull and push. There is practically negligible aging effect on steel plate and screws.</p>
<p><b>Easy to install difficult to replace</b> Fitment of clip on modules in their respective plates may be fast but their replacement may be cumbersome and may result in the breakage of clips.</p>	<p><b>Easy to install easy to replace</b> Fitment of modules on steel plates is with screws. Installing or replacing modules is extremely easy and there is no chance of any breakage</p>

## *Signature.***EL.**

This range has a highly positive geometry and periphery. Which can immediately be riveted with contemporary interiors. Our product quality has been perfected over the years to match up our exacting standards.

## TECHNICAL PERFORMANCE OF SSK MODULAR SWITCHES

**TECHNICAL PERFORMANCE OF SSK MODULAR SWITCHES IN COMPARISON WITH THE  
REQUIRED SPECIFICATION OF ISS CONFORMING TO IS : 3854 : 1997 (ISI MARK)  
(TESTS CONDUCTED AT OUR HIGHLY SOPHISTICATED LAB)**

Nature of Test	ISI Requirement	Performance of SSK modular switches tested at our lab
Electric Strength	Should withstand 2KV (rms) for one minute	It withstood 3KV (rms) for 2 minutes
Temperature rise	Should not exceed 45°C (at ambient 35°C) after 40,000 ON-OFF operations on load	It did not increase 14°C after 50,000 operations in 6 Amp accessories and 18°C after 50,000 operations in 16 Amp accessories.
Milli Volt Drop	Should not exceed 20mv (in 6 Amp and 16 Amp accessories) after 40,000 operations on load. MEANWHILE NOT SPECIFIED UNDER NEW SPECIFICATION IS : 3854 : 1997.	Not exceeded 7mv after 1,20,000 ON-OFF operations in 6 Amp and 9mv in 16 Amp. (After this endurance test the products were found in good working conditions.
Insulation Resistance	Should not be less than 100M ohms (Before humidity treatment).	Found more than 500M ohms (after humidity treatment).
Electrical Endurance test (ON-OFF test)	Switches should be tested at 40,000 operations (ON-OFF) on load.	We tested our switches at 1,20,000 operations on load. (Even after this test, switches worked properly).
Mechanical Strength	Specified only at 0.4 Nm impact energy. (Hammer stroke test from a distance of 170mm).	Tested at a maximum impact energy 1 Nm for all rating and designs. (Hammer stroke test from a distance of 270 mm).
Making & breaking Capacity	The switches and sockets are required to be tested at 130% of the rated current and 110% of the rated voltage for 500 continuous operations, with an interval of 30 seconds.	Our switches and sockets were tested at 130% of the rated current and 110% of the rated voltage for 1500 operations and were found to be in good working conditions thereafter.
Resistance to heat at 125°C	The outer body of the moulding should be heated to the temperature of 125°C for 60 minutes. Thereafter the ball pressure test should not make an impression deeper than 2mm.	There was no sign of any impression on the body (insulation material) of our products, after heating at 125°C for 100 minutes.
Resistance to abnormal heat & to fire (Glow wire test)	This test is performed on parts of insulating material, which might be exposed to thermal stress due to electric effects and deterioration shall not unduly be affected by abnormal heat and by fire at a temperature of 650°C	Was not effected by abnormal heat and fire at 850°C.

### Terms and Conditions :-

- ◆ Prices are in Indian Rupees.
- ◆ This price list supersedes all previous price lists.
- ◆ Prices are subject to change without prior notice.
- ◆ Dispute if any are subject to Kapurthala jurisdiction only.

### Warranty Policy :-

- ◆ All switches and sockets carry a warranty of 10 years from the date of purchase except L.E.D. indicators, Regulators, AC Starters and Electronic Items.
- ◆ L.E.D. Indicators Regulators, AC Starters and Electronic Items carry a warranty of 2 years from the date of purchase.
- ◆ The warranty does not cover metal wall boxes.
- ◆ The warranty is applicable only against manufacturing defects or faulty workmanship.
- ◆ The warranty is however subject to the provision of proper usage and does not cover surface coated products, normal wear and tear of parts, defects arising out of fire, accident, voltage fluctuations and willful or accidental damage.
- ◆ The manufacturer will not be liable for any consequential loss, injury or damages attributable to defect or failure of its products.
- ◆ The company reserves the right to change/improve the design, without prior notice. In such cases, replacements shall be carried out with the design prevailing at that point in time.
